(57) **ABSTRACT**

An electronic transceiver module and method for controlling the electronic transceiver module for network wireless communication in electric and/or electronic devices or systems in high frequency bands up to 10 GHz, including a device for wireless communication connected to an antenna entry, a control device, and a memory device. The control device is connected to the memory device, to the device for wireless communication and to a comparator block, which is further connected to the memory device. The memory device includes at least two separate memories for storing information identifying various wireless networks.
